

Semantic SEO Checklist

Keyword & Topic Research	✓
Identify your primary keyword and related LSI keywords	<input type="checkbox"/>
Use tools like LSI Graph, Google's "People Also Ask", and Semantic Keyword tools	<input type="checkbox"/>
Map out topic clusters based on user intent	<input type="checkbox"/>

Content Structure & Semantics	✓
Use clear H1, H2, H3 headings with semantic meaning	<input type="checkbox"/>
Answer related questions directly in your content	<input type="checkbox"/>
Include latent semantic indexing keywords naturally within body text	<input type="checkbox"/>

Internal Linking & Anchor Text	✓
Link to relevant internal pages using descriptive, semantically rich anchor text	<input type="checkbox"/>
Ensure every key page is linked contextually at least once	<input type="checkbox"/>

Semantic Markup & Tags	✓
Use proper HTML5 semantic tags (<code><article></code> , <code><section></code> , etc.)	<input type="checkbox"/>
Implement schema markup via Google's Structured Data Markup Helper	<input type="checkbox"/>
Test structured data with Google's Rich Results Test	<input type="checkbox"/>

Optimization & UX	✓
Ensure content is readable, scannable, and answers user questions quickly	<input type="checkbox"/>
Add internal links to semantically related articles	<input type="checkbox"/>

Use alt text with semantic value for all images	<input type="checkbox"/>
---	--------------------------

Final Review	✓
Does your page reflect the overall meaning of the topic, not just the keyword?	<input type="checkbox"/>
Are you covering user intent at every level: informational, navigational, transactional?	<input type="checkbox"/>
Have you tested your content for rich snippets eligibility?	<input type="checkbox"/>
